

# TEVERETERNO

Twelve proposals for the Tiber by Kristin Jones

## AQUEUS

*Materials: Neon*

*Dimensions: 1640' L (500 m L)*

Three undulating, 500 meter long lines of white neon will run the full length of the Piazza Tevere's right embankment. Pulsating high along the travertine wall, the three different profiles will create a simulation of the kinetic river surface.

Visible day and night, the fluid lines will mime the Tiber's movement below. During the daylight hours, the work will quietly mirror the river's path, augmenting its silent passage. In the darkness, the bright light will reflect onto the water's surface, illuminating and merging with the current.

*Aqueus* will dramatize the Tiber's motion and beauty, drawing the public's attention to the river and awakening the potential of this extraordinary site.
